

Clock In Canvas

One pixel a day, on-chain forever.

A daily check-in app for Seeker: every clock-in is a real Solana transaction signed in your wallet. Streaks are habits; pixels are proof.

Team Clock In Canvas · github.com/loveoftheai/clockin-canvas

Streak apps forget who showed up.

Every check-in app keeps your streak in a database you can't see, can't export, and can't trust.

- 01** Streaks live in someone else's database — reset on a whim, no proof you kept them.
- 02** Daily rituals have no artifact: 200 check-ins and you own nothing.
- 03** Web check-in pages aren't built for the one device you actually carry daily.

Check in. Place a pixel. Keep the streak.

board (schematic — app is 16×16)

- Touch-first 16×16 board — a 20-second ritual
- One tx per wallet per day (client-side rule)
- Every pixel is a signed memo: coords, color, day
- Miss a day → streak resets; pixels stay on-chain
- Seed Vault wallet via Mobile Wallet Adapter v2

```
memo: {"app":"clockin","x":8,"y":7,"c":"#ff9f1c"}
```

The full MWA round-trip, on-chain.

Devnet proof (from the demo take):

sig 2t4i...QzPs · cold start → authorize → sign → confirmed on devnet in 22s, on a real device

Built to spin the SKR activity flywheel.

A daily check-in is a daily reason to use your own wallet.

Clock In Canvas hits all three Seeker activity categories by design:

Onchain

one signed transaction
per wallet, per day

Daily use

the streak loop makes
opening the app a habit

dApp exploration

published on the Solana
dApp Store (roadmap)

Season 1 (roadmap): the board resets and the finished mural mints as the trophy — SKR-season artwork made of nothing but attendance.

Mobile-native by construction.

Touch-first grid

oversized touch cells, one-thumb clock-in, palette in thumb reach — not a desktop canvas ported down.

Seed Vault native

sign-in and every signature go through MWA — no private keys in the app, ever.

Habit loop

streak + one-pixel-a-day + shared board: mechanics that only work on the phone you carry.

Stack

Expo SDK 57 · React Native 0.86 · React 19 · TypeScript

Wallet

@solana-mobile/mobile-wallet-adapter-protocol-web3js (MWA v2)

Chain

@solana/web3.js · SPL Memo program · devnet in v1, mainnet planned

Built AI-first

designed & wired by AI agents (Claude Code), honesty-passed by Codex

Roadmap.

■ **Now — hackathon build**

working APK · MWA authorize + sign-and-send · per-wallet daily memo tx · streak UI

■ **Next — on-chain board**

Anchor program holds pixel state; board renders from chain; streak recomputed from wallet history

■ **Then — dApp Store**

create-dapp-store publishing pass → installable Seeker app, SKR dApp exploration category

■ **Season 1**

timed boards, mural mint at season end, creator boards for communities

Show up. Ship pixels. Keep the streak.

Clock In Canvas makes the daily check-in a real on-chain act — Season 1 (roadmap) turns attendance into a mural Seeker owners mint together.
